

Who we are

CertifiedSafety is a SAFETY PEOPLE company. We supply our clients with the safety people and processes required to help maintain zero incidents and maximum worker productivity on their projects. CertifiedSafety supports owner and contractor companies across all sectors of the energy industry including power, chemical, refining, midstream, upstream and offshore markets. Our purpose is to increase safety and lower project costs.

What we do

Our clients typically hire us to help them implement and drive their safety plans during daily maintenance activities, turnarounds, shut downs, outages and capital projects. We work with our clients to understand the project objectives, the critical path tasks, and our specific roles in order to collaborate on best practices to support safety compliance and worker productivity. We operate as an extension of our client's team by managing the work scope with responsibilities and duties that are provided to us. This allows our clients to focus on other aspects of their project relative to timelines.

Our people

Our clients tell us, "The people you bring to our site will make the biggest difference on our project." CertifiedSafety has been in business since 2001 and today we have hundreds of capable, experienced leaders on our team. They personify our culture and core values. They are the people that raise their hands when you encounter a unique challenge that needs to be addressed and say "we will handle that for you". They are team players with an infectious can-do attitude and they seek to add value for our clients. These are the people that will have a positive impact on your project. Our people set us apart from others in the industry.

SERVICES OFFERED

Safety Advisors

Our Safety Advisors are experienced in the energy industry to manage, plan, build, implement and audit project safety.

- Safety Managers
- Safety Planners
- Safety Auditors

Safety Attendants

Safety Attendants are trained to properly execute and manage basic safety related duties. They review a permit and fill out a detailed job hazard analysis prior to performing these duties. Our attendants utilize classroom and hands-on training knowledge to help identify, mitigate, and report potential safety hazards.

- Confined Space Entry Attendants
- Hot Work Attendants
- Fresh Air Supply Attendants

General Labor

Maximizing productivity and eliminating waste is a key part of keeping project costs to a minimum. Safety Attendants are cross-trained in one or more general labor roles which are often needed on projects. When attendants are not assigned to a safety specific task, they are utilized as general labor support.

- Unit Clean Up & Housekeeping
- Logistics Support
- Water & Ice Management and Distribution
- Traffic Flagging
- Waste & Trash Management and Separation

CERTIFIED SAFETY

*Bridging the Gap Between **Safety** and **Productivity***

Operations Support

Operations support personnel are tasked with assisting the facility operations team to safely expedite the process of bringing down units for turning them over to the project team to ensure work may begin on schedule.

- Permit Support & Permit Expediting
- Operator Assistants – Oil Out & Oil In Labor Support via turning valves, watching site glasses, draining equipment, and management of temporary hoses and piping

Turnaround Coordinators

Coordinators have 15 years or more petrochemical experience in mechanical & maintenance work. They work directly with plant personnel via assigned duties to oversee and drive specific tasks within a scope of work for projects. These individuals coordinate with plant personnel and contractors to identify and remove obstacles to help get work completed safely and within scheduling. Listed below are some of the skill sets and task descriptions CertifiedSafety Coordinators bring to the field:

- Planning/Scheduling- P6
- Discovery Work Management
- Quality Assurance/Quality Control
- Onboarding
- Logistics and Warehousing Management
- Exchangers
- Piping
- Scaffolding
